Part 1:

Purpose: To introduce UCLA students to the huge modern dance community at UCLA and encourage them to join this community

Information conveyed: The modern dance teams are broken down into categories and they are presented with a short introduction and videos. The information shows the history of the dance teams, the dance styles, how to contact them, and link to more work of the dance teams.

How interesting and engaging: A lot of the social media of the dance teams are linked (Instagram and Youtube) and videos are displayed for them to view conveniently and get an idea of the style of the dance team

Target audience: UCLA students, especially those who are new to UCLA or the UCLA modern dance community

Part 2:

- Click on the logo on the top left to get to the home page
- Click on 'Hiphop' in the navigation bar to be directed to the hip-hop page
- Click on 'Kpop' in the navigation bar to be directed to the kpop page
- On the home page, click on the 'Hiphop' image to be directed to the hip-hop page
- On the home page, click on the 'Kpop' image to be directed to the kpop page
- On the hiphop or kpop page, hover on any dance team's logo to see a preview of the dance team's video
- On the hiphop or kpop page, click on any dance team's logo to be directed to their Youtube page to watch more videos
- On the hiphop or kpop page, click on the Instagram icon to be directed to their Instagram page to contact the dance teams

Part 3:

I used textillate on my homepage because I want my website to look more engaging at a first glance. I used it on the tagline of the hero image so that it can also highlight the actionable sentence to engage the audience. It adds a sense of excitement to my website.

Part 4:

After sketching my design in a notebook and on Figma, I got critiques from my classmates and revised my design before I implemented the website. Compared to the initial design, the website now is more interactive since I added the hover feature and image to video feature. Another improvement is that I decided to link the logo to a Youtube page instead of a pop-up video page on my website because people said they don't want the video to be played suddenly after they click on the logo in case they need to be in a quiet environment. I also made changes to the background of my design from blue to yellow to create a more exciting feel for the website.

Part 5:

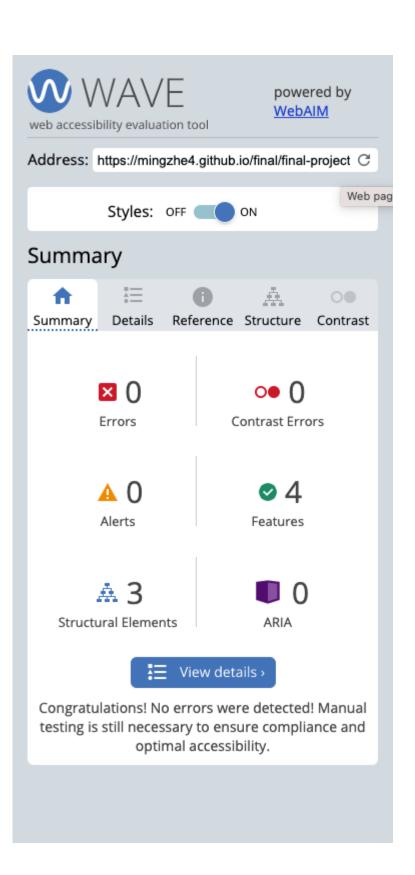

When I was using the textillate library, my code didn't work on my website even though I research a lot of similar examples online and checked with my TA and it seems like it was correct. After trying every way I can think of, it turns out that my code was correct but it is just that some specific effects of textillate did not work so I wasted a lot of time trying to debug.
